Exported from an unofficial mirror of a public mailing list. Copyright in each message remains with the person who wrote it. Email addresses are obscured as `user at host`, the form the original archive published. This file was rebuilt from parsed fields rather than retained headers, so it is faithful in content but not byte-exact.

Hey! Sorry to bother you all with this, but does anybody know how to get rid of all that garbage that appears when I post, repeating the message all broken up and taking up useless space?

Sorry for my ignorance with these things.
