Fish of the New Sun

(Something I hope will amuse you while we're waiting for the discussion of Pirate Freedom to begin.)

Collected by Father Inire through the use of his specular weirs, the following fish (all remnant species from the Age of Myth) will soon be on display in the newly built aquarium wing of the Botanic Gardens:

Gold Severum

Chromis agilis

Green Terror

Satanoperca jurupari

Paleomonetes

Corydoras barbatus

Spotted sunfish (currently isolated, due to HITH* affliction) Nematalosa erebi Scylla serrata Wolf tetra

*Hexamita, more commonly known as "Hole in the Head" disease.

All tended, of course, by various undines.

Be sure to bring some Tropodiaptomus asimi to feed the fish!
