Since most of the technology seems to be wavelength based in The God and His Man, I was wondering if anybody knew anything in light or microwave science that corresponded to that kind of name - isid 1000 1000e. E is a term used in describing wavelengths and frequency, but I don't think isid has anything to do with that. I hate to say it's just a serial number.

I ofteh wondered about that name myself, but I don't have any ideas for it. Could it be verbalised binary code? In the end, I doubt it is important to the interpretation anyway.

Years ago someone suggested it could be 151D, not Isid. Doesn't seem to help, tho.
